Convenient?

Plastic bags are a huge problem for the environment. One thing is the process of creating them, then is the enormous usage people give to them, and finally they stay in the air, soil and water hearing the life around them.

800 Walmart plastic bags, collected from 200 students from September to December 2012, and then tying them to each other in an additive way to create a motif through an immense chain, represents the massive and unnecessary consumption of plastic bags and how those impact our surroundings.

The chain went along a busy footpath on the UWC-USA's campus through stairs, doors and different rooms creating a rhythm with the aim of creating an awareness over the consequences of plastic bags.

The school holds a conference annually, and this year the topic was art and sustainability. So I used this time to put up my work in different places around campus including some next to local artist's pieces.

controversial for the people one creating a very good response shocked and amazed for the bags produced by the students. created a sense of personal plastic bags.

Even though some people keep the knowledge and they can not to change someone's mentality, keep doing creative new ideas to make people know and remember.

For the future I want to keep the plastic bags in the school for students to be able to show it as a case study to future generations. So then when ever a new generation arrives they are aware right away.

The most was the plastic bags, to it. People were ammount of plastic In many of them also activism to stop using

usign them, they have avoid it. It takes time so it is necessary to
